## HEDIS Coding Tips — Well-Child and Immunization Measures

The following CPT®, ICD-10-CM, and HCPCS codes can help reduce the number of medical records we request during the HEDIS® medical record review season (January to May each year). Adding these codes to a claim will help us identify additional information about the visit and improve the accuracy of reporting quality measures.<sup>1</sup>

### Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents (WCC)

99202-99205, 99211-99215, 99241-99245, 99341-99345, 99347-99350, 99381-99387, 99391-99397, 99401-99404, 99411, 99412, 99429, 99455, 99456, 99483	G0402, G0438, G0439, G0463, T1015

Always report BMI documented with other weight-related diagnoses (Code Category E66) when supported through medical record documentation. Do not report a diagnosis of overweight without additional support. A diagnosis of *overweight* does not meet the definition of a reportable secondary diagnosis because it is not considered a significant health risk to the patient. If documentation further discusses the patient’s overweight condition or a plan of care, report the condition.

- For example, an overweight patient with prediabetes and a BMI in the 85th to 95th percentile is referred to a dietician for counseling on weight loss to reduce the risk of developing diabetes. Report:
  - E66.3 Overweight
  - R73.03 Prediabetes
  - Z68.53 Body mass index (BMI) pediatric, 85th percentile to less than 95th percentile for age
