

HEDIS Prenatal and Postpartum Care Coding Bulletin Electronic Clinical Data Systems 2025

HEDIS[®] is a widely used set of performance measures developed and maintained by NCQA. These are used to drive improvement efforts surrounding best practices.

The HEDIS quality measures reported using the Electronic Clinical Data Systems (ECDS) inspire innovative use of electronic clinical data to document high-quality patient care that demonstrates commitment to evidence-based practices. Organizations that report HEDIS using ECDS encourage the electronic exchange of the information needed to provide high-quality services, ensuring that the information reaches the right people at the right time:

- ECDS reporting is part of the National Committee for Quality Assurance's (NCQA) larger strategy to enable a digital quality system and is aligned with the industry's move to digital measures.
- The ECDS reporting standard provides a method to collect and report structured electronic clinical data for HEDIS quality measurement and improvement.
- According to the NCQA, the HEDIS hybrid data collection (medical record collection) will be phased out in the coming years.
- Health plans and healthcare providers will need to take advantage of electronic data streams to ensure accurate reporting of measures that require data not typically found in a claim.

Note: HEDIS® is a registered trademark of the National Committee for Quality Assurance (NCQA).

Healthy Blue

- CPT[®] Category II codes can be used for performance measurement. The use of the CPT II decreases the need for record abstraction and chart review.
- CVX codes (vaccine administered code set) represent the type of product used in an immunization. Every immunization that uses a given type of product will have the same CVX, regardless of who received it.
- Logical Observation Identifiers Names and Codes (LOINC) codes and SNOMED codes (supports the development of comprehensive high-quality clinical content in electronic health records) do not appear on claims and are quickly becoming vital to HEDIS reporting, especially for ECDS measures:
- LOINC codes While typically associated with lab data, there are several behavioral health and social drivers of health screenings that can only be represented by LOINC codes for the purposes of HEDIS reporting and can be extracted from electronic medical record (EMR) systems.
- SNOMED codes represent both diagnoses and procedures as well as clinical findings.
 SNOMED codes are the industry standard for classifying clinical data in EMR systems and can be extracted from EMR systems.
- Because LOINC codes and SNOMED codes can only be obtained through supplemental data feeds, it is important that health plans and the provider community embrace the sharing of these EMR data to ensure the quality of care our members are receiving.

How can we help?

- Use this bulletin as a reference to understand the ECDS measures and the coding associated with electronic data transmission.
- Contact your health plan representative to establish an electronic data transfer with the plan if your organization does not already have one.
- Make full use of CPT II codes to submit care quality findings, many HEDIS gaps could be closed via claims if CPT II codes were fully utilized.
- Offering current *Clinical Practice Guidelines* on our provider selfservice website.
- Members may be eligible for transportation assistance at no cost:
 - For transportation benefits, members can contact Member Services for help with getting a ride to nonemergent medically necessary appointments and treatments.
- Other social health need resources, such as assistance with food, may also be available at no cost. Contact Member Services for more information.

Our Supplemental Data team is here to help

For additional support in submitting supplemental data for ECDS measures, send inquiries to supplementaldata@healthybluenc.com.

Helpful tips:

- Educate expectant mothers on the importance of vaccines during pregnancy. If you do not have flu vaccines available, refer the patient to another healthcare provider, pharmacy, or community vaccination center.
- Educate expectant mothers that influenza can result in serious illness, including a higher chance of progressing to pneumonia, when it occurs during the antepartum or postpartum period.
- Educate mothers on how the flu vaccine will protect both her and her baby.
- Educate mothers on passive immunity that the maternal immunization will pass on to their newborns.
- The Tdap vaccine is recommended in the third trimester as this will boost the neonatal antibody levels in the baby. Babies whose mothers had the Tdap vaccine during pregnancy are better protected against whooping cough during the first two months of life.
- Explain to expectant mothers that the Tdap vaccine will protect them and their baby from pertussis and its life-threatening complications.

- Optimize your charting system to prompt your providers to perform any of the specified prenatal depression screening tools at the first prenatal visit as part of your standard initial prenatal exam.
- Whenever possible, depression screening and treatment are culturally appropriate and offered in the patient's first language.
- Members of the care team understand the importance of depression screening to recognize the risk factors for depression in pregnancy.
- Medication:
 - Advise mothers, even when pregnant, that they may be able to take medication to treat their depression.
 - Advise mothers, even when breastfeeding, that they may be able to take medication to treat their depression.
- Have options for community counselors and psychiatry available for patients interested in that option if screened positive. Advise that these organizations offer confidential help.

Prenatal Immunization Status (PRS-E)

This measure discusses the percentage of deliveries in the measurement period (January 1 to December 31) in which women had received influenza and tetanus, diphtheria toxoids, and acellular pertussis (Tdap) vaccinations.

Prenatal Depression Screening and Follow-up (PND-E)

This measure discusses the percentage of deliveries in which members were screened for clinical depression while pregnant and, if screened positive, received follow-up care during the measurement year:

- *Depression Screening* the percentage of deliveries in which members were screened for clinical depression during pregnancy using a standardized instrument
- *Follow-up on Positive Screen* the percentage of deliveries in which members received follow-up care within 30 days of a positive depression screen finding

A standard assessment instrument that has been normalized and validated for the appropriate patient population. Eligible screening instruments with thresholds for positive findings include:

- 1. Brief screening instrument: All other instruments are full-length.
- 2. Proprietary; may be cost or licensing requirements associated with use.

Postpartum Depression Screening and Follow-up (PDS-E)

This measure discusses the percentage of deliveries in which members were screened for clinical depression during the postpartum period, and if screened positive, received follow-up care during the measurement year:

- the delivery date)
- care within 30 days of a positive depression screen finding (31 total days):
 - Any of the following on or up to 30 days after the first positive screen:
 - An outpatient, telephone, e-visit, or virtual check-in follow-up visit with a diagnosis of depression or other behavioral health condition
 - A depression case management encounter that documents assessment for symptoms of depression or a diagnosis of depression or other behavioral health condition
 - A behavioral health encounter, including assessment, therapy, collaborative care, or medication management

Note: The codes listed are informational only; this information does not guarantee reimbursement.

* There are many approved NCQA codes used to identify the services included in the measures listed below. The following are just a few of the approved codes. Please see the NCQA website for a complete list: https://ncqa.org.

• *Depression Screening* — the percentage of deliveries in which members were screened for clinical depression using a standardized instrument during the postpartum period (7-84 days following

• *Follow-up on Positive Screen* — the percentage of deliveries in which members received follow-up

- A diagnosis of encounter for exercise counseling (ICD-10-CM code Z71.82). Do not include laboratory claims (claims with POS code 81)
- A dispensed antidepressant medication or
- Documentation of additional depression screening on a full-length instrument indicating either no depression or no symptoms that require follow-up (for example, a negative screen) on the same day as a positive screen on a brief screening instrument

The codes and measure tips listed are informational only, not clinical guidelines or standards of medical care, and do not guarantee reimbursement. All member care and related decisions of treatment are the sole responsibility of the provider. This information does not dictate or control your clinical decisions regarding the appropriate care of members. Your state/provider contract(s), Medicaid, member benefits, and several other guidelines determine reimbursement for the applicable codes. Proper coding and providing appropriate care decrease the need for high volume of medical record review requests and provider audits. It also helps us review your performance on the quality of care that is provided to our members and meet the HEDIS measure for quality reporting based on the care you provide our members.

Note: The information provided is based on HEDIS Measurement Year 2025 technical specifications and is subject to change based on guidance given by the National Committee for Quality Assurance (NCQA), the Centers for Medicare & Medicaid Services (CMS), and state recommendations. Please refer to the appropriate agency for additional guidance.
